

Practice Midterm 2 Fall 2009

PROBLEM 1

Find a basis for the subspace of \mathbb{R}^4 defined by $x_1 + 2x_3 + x_4 = 0$.

PROBLEM 2 (a) Find the determinant for $A = \begin{bmatrix} 0 & 2 & 0 & 0 \\ 1 & 2 & 0 & 0 \\ 0 & 0 & 1 & 2 \\ 0 & 0 & 0 & 1 \end{bmatrix}$ by expand-

ing along the second row.

(b) Find the determinant of A , using properties of the determinant under row-reduction.

PROBLEM 3

True or false: Justify your answer in one or two sentences.

(a) If an invertible square matrix A is diagonalizable, then so is A^{-1} .

(b) Suppose A is a square matrix with row vectors v_1, v_2, v_3 . If $\det(A) = 2$, then the determinant of the matrix A' with row vectors $v_1 + v_3, v_2, v_1 + v_2 + v_3$ is also 2.

(c) The dimension of the column space of A is the same as the dimension of the row-space.

(d) If A is a 7×3 matrix whose rank is 3, then the rows of A are linearly independent.

(e) If $Q = Q^{-1}$, then $\det(Q) = \pm 1$.

(f) The row space is the orthogonal complement of the nullspace.

(g) For any square matrix A , $\det(-A) = -\det(A)$.

(h) If $z = -1/\sqrt{2} - i/\sqrt{2}$ then $z^{40} = 1$.

(i) If A, B are similar matrices, then they have the same eigenvectors.

PROBLEM 4 Find the eigenvalues and eigenvectors for the matrix $A =$

$\begin{bmatrix} 2 & 1 & 0 \\ 1 & 2 & 1 \\ 0 & 1 & 2 \end{bmatrix}$ Find the diagonalization of A , if it exists.

(b) Same for $A = \begin{bmatrix} 0 & 1 & 0 \\ -1 & 0 & 0 \\ 0 & 0 & 1 \end{bmatrix}$ using complex numbers.

PROBLEM 5

Let $z = -1 + i$.

Find (a) The polar form of z .

(b) The conjugate of z .

(c) The inverse of z .

(d) The power z^{10} of z .

PROBLEM 6

Two companies are competing for customers. Each year, the first loses 25 percent of its customers to the second, while the second loses half.

(a) Write down the state vector and time evolution matrix for this system. That is, represent the system in the form $x(t+1) = Ax(t)$, for some matrix A .

(b) Find the diagonalization of the matrix A .

(c) Suppose that initially, 100 customers are with the first company, and none with the others. Find a formula for the number of customers with the first as a function of the year t .

(d) How many customers does the first company have, for t very large?

PROBLEM 7 Define a sequence $f(n)$ by $f(n+1) = f(n) + f(n-1)$. Find starting values $f(1), f(2)$ so that the limit is zero.

PROBLEM 8

(a) Show that 0 is an eigenvalue of A , if and only if $\det(A) = 0$.

(b) Show that the eigenvalues of $I + A$ are the eigenvalues of A plus 1.
